Extra acumulator -identic original-	100.500	€ 145

**LIFTKAR** MTK

Platforma mobila semiautomata de marfa

**What makes the transport over stairs easy, quick and safe?**

The transport of heavy and bulky loads over stairs was a problem that could hardly be overcome: several people had to carry the goods up and downstairs, often with a high risk of damage to the back. Thanks to **LIFTKAR** this is now a thing of the past.

**LIFTKAR** the special hand truck

has an electric lifting system built in, so it is indispensable for anyone who has to transport heavy and awkward loads:

1 person can manage to transport the load

- up to 310 kg easily, safely and quickly (8 – 18 steps per minute)
- over almost all kinds of stairs (even winding stairs) and
- to move the load comfortably and smoothly (due to pneumatic tyres) on level ground.

Therefore **LIFTKAR** pays for itself in a short time.

**LIFTKAR** easy to handle and ideal for various tasks

The heart of the hand truck is the electric lifting system with a crank drive. It is controlled by the electronic power switch, actuated by push buttons located on the right handles. By releasing the push button the load can be put down in every position. A sliding clutch protects the handtruck from mechanical overload. Double handles and a foldable frame enables the load to be under optimal control in every position.

A quick-change battery unit is included. In order to guarantee long-term use, the battery can be recharged quickly by a special quick battery charger for use in trucks and vans.

**LIFTKAR**<sup>MTK 310</sup>

Doing the “hard job”. Even bulky goods such as cases, stoves, safes and vending machines are handled easily. This model has an additional **automatic brake** on the main wheels as standard equipment. This guarantees safe and controlled handling of heavy loads.

**LIFTKAR**<sup>MTK 190</sup>

Faster than the MTK 310. Standard without automatic brakes but available as an option.
